PUBLICATION DATE- 2000-03-03

INTERNATIONAL PATENT CLASS- G02F001167; G09F00937

APPLICANT(S)- SONY CORP

PUBLICATION COUNTRY- Japan

PROBLEM TO BE SOLVED: To provide an electrophoretic display device which solves the problem accompanying a sp. gr. difference from dispersion media by lowering the sp. gr. of migration particles and is improved in reflectivity and a contrast ratio.

SOLUTION: This electrophoretic device 10 is constituted by inclosing the dispersion media 13 colored by dyestuffs and the electrophoretic particles 14 dispersed therein into a spacing between a transparent substrate 11 and a counter substrate 12 arranged to face the same and executes display action by the electrophoretic

effect of the electrophoretic particles 14 by the presence or absence of the voltage impression between the transparent substrate 11 and the counter substrate 12. The electrophoretic particles 14 are formed of a composite material obtd. by apparently combining a high-polymer resin material and a low-molecule resin material.
